

Coding Standards:

1. Global Variables in all caps
2. Four space indentation
3. Include comments that describe how code works and why, include name and date it was last updated
4. Two people need to review and approve code
5. camelCase for variables and PascalCase for classes
6. CSS in the header
7. Code and functions in the body
8. Use descriptive variable names
9. Keep functions short and single purpose
10. Use helper functions for repeated tasks
11. Be smart using const vs. let vs. var
12. Always enable "use strict" to use strict mode
13. Opening curly brace for functions should be on a new line. BSD style.
14. Meaningful commit comments should be included.
15. For unit tests: Follow the AAA Pattern, Use descriptive test names, Keep tests independent of one another, Test edge cases
